

LIGHTNING TALKS

Thursday 5th May

- | | | |
|-------|-------------------|--|
| 15:30 | Verena Lauströer | Analyzing genetic and clonal diversity of <i>Arnica montana</i> – a means to stop the species' decline? |
| 15:33 | Barbora Lepková | Seed dispersal by free-ranging herbivores and its impact on vegetation |
| 15:36 | Maciej Wodkiewicz | Secondary dispersal – how much of the invaders genetic variability can slip between our fingers – a case study of <i>Poa annua</i> on King George Island |
| 15:39 | Jana Duchoslavová | Does resource sharing help to win in competition? |
| 15:42 | Svenja Block | Dimensions of precipitation change that may promote spread of ornamentals |

Friday 6th May

- | | | |
|-------|----------------------------------|---|
| 15:30 | Maximiliane Herberich | The importance of the hydrological regime on structuring plant communities |
| 15:33 | Maria Fernanda Arroyave Martinez | Intra- and inter-specific plant interactions: an experimental approach using three model species |
| 15:36 | Pavol Eliáš | Fluctuations of flowering plants numbers in local populations of a monocarpic species <i>Verbascum speciosum</i> at northern limit of its geographical distribution: twenty years study |
| 15:39 | Zhiyong Liao | Post-introduction evolution of invasive <i>Chromolaena odorata</i> to water deficit |
| 15:42 | Gerhard Karrer | Successful control of an invasive plant by optimized mowing regime |
| 15:45 | Sirgi Saar | Root litter and soil legacies: are local and systemic plant responses possible? |
